SUMMARY

Expert at building cohesive, high-performance engineering teams, multiplying business value through technology, and ensuring consistent delivery of reliable, scalable software solutions.

EXPERIENCE

Nomad - Head of Engineering   Apr '21 – Present

+ Defined software development process enabling efficient, consistent software releases for internal and external stakeholders increasing delivery rate of impactful software by 300%

+ Architected entire application software ecosystem containing three main services. Coordinated with six third party data sources used for customers and internal business decision enablement

+ Created career progression framework and structure to help Engineers achieve their goals resulting in significant professional growth and 100% Engineering retention and a highly engaged team of Engineers

+ Created hiring plan and interview process resulting in a 500% growth in full time Engineers distributed across the United States

Arcadia - Staff Software Engineer   Jul '19 – Apr '21

+ Designed and led development of internal architecture shift towards RESTful services resulting in completion of complex internal applications

+ Introduced strong Software Engineering patterns to enable more cohesive and stronger development cycles for junior and mid level developers

Test Double - Senior Software Engineer   Jan '19 – Jul '19

+ Consultant deployed to augment and improve Software Engineering teams focused on improving code quality, team dynamic, and developer experience

Apartment List - Senior Software Engineer/API Tech Lead   Feb '14 – Dec '18

+ Responsible for company infrastructure direction and main decision maker for scaling crucial services

+ Designed, architected, implemented, and was Tech Lead for in house notification system resulting in 30% revenue gain company-wide

+ Regularly gave internal talks educating the team on Software Engineering patterns and API design

Year of Commits   Apr '15 – Apr '16

+ Year long challenge to learn and contribute to Open Source software every single day

+ Weekly articles written about things learned in Open Source development and other Software Engineering thoughts/design patterns

Change.org - Software Engineer   **Sept '12 – Nov '13**

+ Individual contributor for many revenue generating projects focused on fundraising both internal and external

+ Main point of contact for multiple third party integrations to main application requiring collaboration with many external engineers

Apartment List (dba Vertical Brands) - Software Engineer   **Mar '11 – July '12**

+ Architect and author of eventual subsidiary Auto List which included managing a team of remote contractors in addition to being lead contributor and application developer

+ Maintainer of legacy applications while helping move the company into a rewrite of those applications into newer, more modern technologies

SKILLS

Ruby, Ruby on Rails, Postgres, Python, GraphQL, JavaScript, AWS, Heroku, Redis, Git, Terraform

EDUCATION

Computer Science, Bachelor of Science (B.S.)   **2009**

Virginia Commonwealth University
